A Free Oscillation of Earth During the Leap Second of 30 June 2012¹

$$W_n = \sum_{i=1}^{18} A_i \sin(\phi_n F_i \theta),$$

Where:

W_n = Time domain signal n

$\phi_1 = 1.000000000$: The constant Unity

$\phi_2 = 1.000000004$: Ratio of the rate of rotation of the Earth between 29 June 2012 and 30 June 2012²

$\theta = 0.8141 mHz$: Fundamental frequency of the free oscillation of the Earth³

F, A : Relative frequency and amplitude of the harmonic spectrum of the free oscillation of the Earth for the given spherical harmonic modes
